

myMMX^{DB}

VIDEO RELAY AND BRAILLE COMMUNICATION FOR PEOPLE WHO ARE DEAFBLIND

myMMX DB is a communication solution that can be adapted to the individual needs of a person with combined visual and hearing loss. Individuals who are DeafBlind need accessible features to make telephone calls.

Use a PC to make calls using text, braille and sign language. With the PC, you can sign and type or enter braille. You can enlarge the font sizes and buttons, and tab between the features, or use a refreshable braille display to read the screen. When using the PC, people can sign and receive text back, which can be read on a braille display.

Individual needs will vary and often involve a connection to a braille display and/or other adaptive software such as magnifiers and screen readers. With the customization of adaptive software, video and/or text can be used in a much more flexible way during a call.

myMMX DB special features include:

- Ability to utilize and connect to a braille device
- Easy to navigate, with buttons that can be easily accessed and easy to move between basic features such as make call, answer call, read text, type.
- Option to change background colors and to adjust text font, size and color.
- Video capability allows two individuals to communicate using sign language interpretation to voice.
- A third party Relay Service to provide sign language to speech interpretation, and back in sign language and/or text and braille.

Accessibility

Minimum requirement of Intel Core i3 or equivalent processor, 2GB internal memory, a web camera with a minimum of 1,3 MP that supports VGA/CIF format. Connection to Jaws® requires a 64-bit version of Windows. Can be used with screen-reading software (JAWS), refreshable braille display and magnifying software (Zoomtext®). Text, video and voice can be used to make calls.

Network Requirements

Minimum requirement of 512 kbps upstream and downstream. myMMX DB is used for real-time communication between deafblind consumers, and they can text and/or sign to each other using the communication solution. Phone numbers are provided by the rely service to make and receive calls, just like any other telephone call.
